20: C=<MVP>=====
21: C PURPOSE: Set energy and other parameters necessary to start
22: C random walk for fission source of eigenvalue problem.
23: C this routine may be called more than once for a batch (probably
24: C before each sub-batch).
25: C
26: C (formerly working as "Preparation of fission source before
27: C each batch")
28: C
29: C Selection of fission sources from fission neutron bank is moved
30: C to FISSET routine wich should be called at the beginnig of each
31: C batch .
32: C
33: C CALLED IN: SOURCE
34: C CALLS : SEF5N2
35: C HISTORY: EXTRACTED FROM 'SOURCE' ROUTINE. ( FEB 1992 )
36: C-----
37: C arguments:
38: C i NGENE : number of fission sources set in this routine.
39: C
40: C i IFISB(*) : index pointer to fission neutron bank selected for
41: C fission source of current batch.
42: C More than one elemnts of this array may be pointing
43: C the same fission bank elements.(take care for vectorization)
44: C
45: C i NFB0 : use fission bank of indecies IFISB(NFB0+1:NFB0+NGENE).
46: C
47: C i WFFACT : normalization factor of fission source weight.
48: C i NFBNK0: fission bank array length
49: C i XXXF,YYYF,ZZZF,EEEF,INUF,IZZF,LEVLF,LZZF,LPOSF,LCRSF,IBRGF,IBSPF,
50: C KLSFF, DFBK,KDFBK,IFBK,KIFBK :
51: C Fission neutron bank arrays.
52: C
53: C <<Caution>>
54: C
55: C When NHSUB < NHIST, which means more than one sub-batch are
56: C necessary for a batch, another set of fission bank arrays
57: C XXXF2, YYYF2, .... are passed as XXXF, YYYF, ... and
58: C array size NFBNK0 is not the global data for XXXF, YYYF,...
59: C but that for XXXF2, YYYF2 (must be same as NHIST).
60: C
61: C o IBP(*) : bank pointer of generated source.
62: C o WSUM : source weight sum
63: C o XSOC : source weight sum of current batch id XSOC(NBATCH+1)
64: C o NCNTR(1,1), WCNTR(1,1) : total number and weight of fission source
65: C

```

```

66: C o NFFL, IZFFL, LSFFL : free flight particle stack.

12: C PURPOSE: Set initial parameters for perturbation and beff
13: C      calculations.
14: C
15: C CALLED IN: SOURCE
16: C CALLS:
17: C HISTORY: EXTRACTED FROM 'SOURCE' ROUTINE. (2009/05/29)
18: C-----
19: C arguments
20: C i NGENE : number of fission sources set in this routine.
21: C
22: C i IFISB(*) : index pointer to fission neutron bank selected for
23: C      fission source of current batch.
24: C      More than one elements of this array may be pointing
25: C      the same fission bank elements.(take care for vectorization)
26: C
27: C I NFBNK0: fission bank array length
28: C i XXXF,YYF,ZZF,EEF,INUF,IZZF,LEVLf,LZZF,LPOSF,LCSF,IBRGF,IBSPF,
29: C      KLSFF, DFBK,KDFBK,IFBK,KIFBK :
30: C      Fission neutron bank arrays.
31: C
32: C <<Caution>>
33: C
34: C      When NHSUB < NHIST, which means more than one sub-batch are
35: C      necessary for a batch, another set of fission bank arrays
36: C      XXXF2, YYF2, ... are passed as XXXF, YYF, ... and
37: C      array size NFBNK0 is not the global data for XXXF, YYF, ...
38: C      but that for XXXF2, YYF2 (must be same as NHIST).
39: C
40: C o IBP(*) : bank pointer of generated source.
41: C o WSUM : source weight sum
42: C o XSOC : source weight sum of current batch id XSOC(NBATCH+1)
43: C o NCNTR(1,1), WCNTR(1,1) : total number and weight of fission source
44: C
45: C o NFFL, IZFFL, LSFFL : free flight particle stack.
